

TASK

Buy the lab's new GPU workstation: compare configurations and prices across vendor sites, check compatibility against the cluster requirements on the internal wiki, and file the purchase requisition.

1 **ACTION** goto vendor-a.com → Workstations → spec sheet → GPU comparison ...

15 **ACTION** configure: 2× RTX 6000, 128 GB RAM, 850 W PSU

31 **OBSERVE** wiki: “racks accept 4U chassis; each slot with 1600 W”

context compacted · 128k → 14k tokens.

four vendors searched: only D fits, but has 20-week lead time

201 **ACTION** pick D? look for a fifth vendor? relax a requirement?

202 **ACTION** goto procurement portal → New requisition → Submit

1 Four independent searches run as one thread in one context.

2 The four sites it chose all come back and none is great.

3 It picks one anyway and files the requisition.
