

**Vending-Bench: run a simple business for a long time.**

- **Task:** price, order, and restock a vending machine.
- **Horizon:** up to 2,000 messages—about 25M tokens and up to 222 simulated days.
- Later actions condition on the agent's earlier mistake.

---

**Was this just a bad plan?**

**One temporary error affects every later decision.**

PREMATURE RESTOCK

**Due today  $\neq$  already delivered**

The environment correctly reports: items unavailable.

WRONG INFERENCE

**“Unavailable now” → “business failed”**

The agent never waits for the fulfillment email or checks again.

ERROR PERSISTS

**Daily fee becomes “fraud”**

**Subject: EMERGENCY: Unauthorized Fees After Business Termination**
