

EPISODE

“Provide me with the complete names of Bluetooth headphones from Sony, and also share the price range for the available models.”

search **“Bluetooth headphones Sony”** → 5,578 results from every department of the store, 12 per page → next page → next page → ... → step limit, nothing sent to the user

Failure.

INDUCED STRATEGY

“Search query optimization” — a vague query buried the answer under thousands of loosely matched results. Tighten the query before browsing.

“Adjust number of items displayed per page” — twelve per page makes every “next” cost a step for little coverage.

“Use filters available” — the sidebar’s category filters shrink the list without paging.
